Saint Mary's University General Safety Information

While on campus it is important to be aware of general safety policies and procedures governing Saint Mary's (SMU). This document is not an exhaustive list, however it will cover the basic general information that anyone should be aware of who comes to campus.

Emergency Management System (EMS)

The University has several policies regarding emergency management which can be found on the SMU website within the 'About SMU' section. It is important to familiarize yourself with the exit locations in case of an emergency for each building you are in. A campus map can be found [here](#).

In the case of an emergency an announcement will be broadcasted through the University. Unfortunately at this time (early 2019) the broadcasting system is only auditory through the internal PA system and not text-based.

For more information about the EMS, please visit this [webpage](#).

General Safety Information

Take note of the [campus map](#) for parking and building location information, as well to familiarize yourself with the campus. Knowing the closest exits is important for your safety; please spend a moment to note where you are on campus.

General safety information pertaining to Faculty of Science lab spaces: [Science Safety Resources webpage](#) & [Appropriate Attire for all Laboratory Users poster](#).
